

Transalis Data Management Solutions

The **Transalis DataCapture™** solutions streamline processes with automated extraction and digitisation of data between multiple systems. Organisations can analyse internal and external data to see how their supply chains are performing.

By integrating and analysing multiple data sources, including unstructured data, organisations can remove manual processes, automate business processes, implement paper-to-digital processes, data migration between systems, data cleansing and data sharing to reduce costs and gain significant strategic advantage.

Transalis Digitises Data Removing Manual Processes

- Transalis DataCapture™
- Automated Extraction
- Streamlined Processes
- Paper-to-Digital
- Data Integration
- Data Analysis
- Data Sharing
- Data Cleansing

Staying competitive in a disruptive business environment requires a new kind of supply chain focused on agility. We digitise and integrate any data with any system, allowing highly flexible integration of multiple documents and standards between multiple networks, systems and trading partners.
