

# Transalis IoT Data Integration

The **Transalis DataDNA™** solutions securely integrate data from IoT networks so automated or human actions can be taken to mitigate problems, analyse data patterns and process raw data into valuable information to improve coordination and control, performance of complex systems, and provide a significant strategic advantage to organisations that take advantage of IoT data.

*Certified MIT Internet of Things Business Implications and Opportunities Programme.  
Member British Blockchain Association. Member Crypto Valley Association.*

## Data Integration from IoT Wi-Fi & 4G Networks

- Transalis DataDNA™
- Automated Capture
- Data Provenance
- Machine-to-Machine
- Data Integration
- Data Analysis
- Data Sharing
- Data Cleansing

Staying competitive in a disruptive business environment requires a new kind of supply chain focused on agility, flexibility and responsiveness. That means having the right technologies and capabilities, to master digital technologies and embed them in digital supply chains.
